

DATA SHEET

Product Name: Beta-Amyloid (1-40), D23N Mutant

Catalog #: A-1013

Source: Recombinant. A DNA sequence encoding the human beta-amyloid (1-40) sequence, with a point mutation (D23N), was expressed in E. coli

Molecular Mass: 4,329 Da theoretical

Protein Purity: >97% by Mass Spec.

Counter Ion: TFA

Supplied As: White lyophilized powder

Resuspension: Resuspend in 1% NH₄OH at conc. of .1-1 mg/ml. Recommended to briefly centrifuge to ensure full resuspension of product.

Storage: -20°C

Description: Beta-amyloid (A-beta) has been long reported as the major constituent of amyloid plaques in the brains of Alzheimer's patients, and is believed by many to be the cause of Alzheimer's Disease (AD). AD is the most common neurodegenerative disease and afflicts more than 10% of the population over 65. Recombinantly expressed and sourced from E. coli, rPeptide's high quality beta-amyloid products offer batch-to-batch consistency and ultrapure starting material for your research needs. The TFA (trifluoro-acetic acid) counter-ion is a peptide which was lyophilized in a final solution containing TFA and is a popular choice for researchers wishing to build on previous studies using this same product.
