

DATA SHEET

Product Name: Alpha-Synuclein 2G9 Antibody

Catalog #: SAb-1002

Host: Mouse

Reactivity
Species: Human

Isotype: IgG1

Protein Purity: >90% by SDS-PAGE

Supplied As: Liquid

Counter-ion: 1x PBS Buffer pH 7.4

Storage: -80°C

Description: Alpha-Synuclein (α -Synuclein) is a presynaptic protein found to be a major component of Parkinson's Disease (PD) aggregates and is implicated in the pathogenesis of PD and related neurodegenerative disorders. Alpha-Synuclein 2G9 is an rPeptide exclusive mouse monoclonal antibody that binds most of the Alpha-Synuclein proteins. This antibody does not recognize the Alpha-Synuclein 1-60, 1-95, or NACP splicing variant, indicating the epitope is located near the C-terminus. This anti-Alpha-Synuclein mouse derived monoclonal antibody recognizes all but three Alpha-Synuclein constructs. Possible applications may include isoform identification, qualitative analysis, or expression level monitoring through western blots, ELISAs, or other methods.
