

## DATA SHEET

**Product Name:** Tau-441, V248L Mutant

Catalog #: T-1015

Source: Recombinant, in E. coli. No his-tag.

**Molecular Mass:** 45.92 kDa

**Protein Purity:** >90% by SDS-PAGE

50mM MES, pH 6.8, 100 mM NaCl and 0.5 mM EGTA Counter Ion:

Supplied As: White lyophilized powder

Resuspend in water at conc. of .1-1 mg/ml. Recommended to briefly Resuspension:

centrifuge to ensure full resuspension of product.

-20°C Storage:

Description:

References:

Tau is a family of major neuronal microtubule associated proteins that are found in the neurofibrillary tangles (NFT) in Alzheimer's disease. Tau promotes the assembly and maintains the structure of microtubules in neuronal cells<sup>1,2,3</sup>. The tau proteins are derived from alternative mRNA splice variants that originate from a single gene and result in mature proteins that vary in size from 352 to 441 amino acids (36.8 to 45.9 kDa). There are six tau isoforms that differ from one another in having three or four microtubule binding repeats (R) of 31-32 amino acids each, and two, one or zero amino terminal inserts (N) of 29 amino acids each4. While the fetal brain contains a single isoform of tau (tau-352) the adult brain has several isoforms all derived from a single gene by alternative mRNA splicina<sup>5</sup>. rPeptide provides all six major isoforms of tau

as well as several mutations of the wild type proteins, in addition to labeled

products or preformed fibrils of the tau-441 isoform.
